

1. B (hierarchical, linear, and random)
2. B (perceivable, operable, understandable, and robust)
3. D (all of the above)
4. C (both a and b)
5. B (complementary)
6. The two platforms are eBay and AliExpress
 - Repetition: Both sites have the same product card layout, which includes an image, title, price, rating, and number of reviews. AliExpress uses its red and orange brand colors for buttons, sale badges, and promotional banners. eBay features its blue color in the header, links, and call-to-action buttons throughout the site. Both sites also use horizontally scrollable category filters in the same format at the top of the listing pages.
 - Contrast: AliExpress uses bold red on white backgrounds to emphasize urgency for flash sales and price discounts. Prices in red are used for sale prices compared to the crossed-out original price in grey. eBay uses yellow for the "Buy It Now" buttons compared to the white card backgrounds. The eye is immediately drawn to this button for the primary action. The auction countdown timers are in red to emphasize urgency on a neutral-colored background.

- Proximity: Both sites place key purchase decision factors such as price, shipping cost, estimated delivery time, and seller ratings in a tight cluster within the product card. On the product page, both sites cluster the product title, price, options (size/color), and "Add to Cart" button in a single column to the right. AliExpress also clusters the buyer protection badges around the "Add to Cart" button.
- Alignment: AliExpress uses a grid-based left alignment for the layout of the products. It has a dense multi-column layout, which is because of the large number of products available. eBay uses a more flexible layout for alignment, providing the user with the options of grid and list views for the search results. In the list view, the image of the product is aligned to the left, and all the other information is aligned to the right of the image. Both sites have the same alignment for the top menu in all pages.
