Part 4:

- a) The website I chose is <https://www.amazon.com/>
- b) Amazon is one of the biggest e-commerce platforms that allows people to sell and buy products online. It offers variety of products like electronics, clothes, books, etc. It provides services like fast delivery, feedback and recommendations to help customers choose what they want to buy.
- c) The platform intends different type of people like: the one who want to shop online quickly and conveniently, it is designed to serve people from different ages, including students, families, and businesses. It is also useful for sellers who want to sell their products.
- d) Yes, I think the website reaches its intended audience, because everyday millions of people use it to shop online, and the website is trusted and offers products from different categories that leads to the attraction of customers.
- e) Yes, it is useful to me, because I can find whatever I want on it, I can compare prices, see feedbacks, and see the ratings before I buy any product.
- f) The website is appealing to me, and this is due to the organization and navigation of the website, as it is well organized and easy to navigate, and the use of colors and images of products is also appealing, as well as the search bar for finding products easily.

- g) Yes, I would encourage others to visit the website because it is convenient and offers different types of products, so customers can buy anything they want from home.
- h) The site could also be improved by reducing the complexity of the pages, considering that there is a lot of advertisements and products that sometimes make the page look cluttered. The filtering system could also be improved, and the navigation could also be made simpler.
